PROFILE

Full-stack software developer and cloud engineer with 2.5+ years shipping production systems from a solo-built ride-sharing platform to serverless AWS applications running live for real businesses. Experienced across React, React Native, Vue.js, Node.js/Express and MongoDB, with hands on AWS deployment (Lambda, API Gateway, EC2, S3, Amplify, Route 53). Currently completing an MSc in Data Science & Analytics at Brunel University London, adding statistical and ML depth on top of a full-stack and cloud engineering foundation.

EXPERIENCE

Data Scientist — Appleberry Foods Limited,London **Aug 2026 - Present**

- Built the frontend of a retail demand-forecasting dashboard using **Vue 3, Pinia and Vue Router**, integratingRESTAPIs forlive EPOS and stock data
- Connected the interface to an **AWS Lambda-based forecasting service**, turning store-level demand predictions into a manager-friendly reorder view
- Delivered sales reporting, stock-operation history and **Excel report export** for non-technical store managers

Full Stack Developer — DGMA Technics Ltd, London DGMA Technics **May 2026 - Aug 2026**

- Designed and built DGMA Technics corporate website end-to-end using **React.js**, covering company, manufacturer and product-category pages across land, naval, aerospace and heavy-industry systems
- Integrated **AWS-based hosting and deployment** for a reliable production environment
- Owned the workflow end to end UI design, implementation, deployment and optimisation, including SEO and responsive design

Software Developer & Technical Consultant — Eco Voltex Ltd, London Eco Voltex **Dec 2024 - Jan 2026**

- Designed and built **5 internal systems** end-to-end: company website, invoicing, employee attendance, HR management and business management
- Built serverless **Node.js/Express backends on AWS Lambda and API Gateway**, with MongoDB Atlas for data and Amplify/S3/Route 53 for hosting and DNS
- Consulted on onboarding merchants to Amazon, eBay, Just Eat, Uber Eats and Deliveroo, and built the **Haji Saab e-commerce platform** (React, Stripe, Radar API) on the same architecture

Software Development Intern, R&D — Electrical Engineering, University of Lahore **Jun 2024 - Sep 2024**

- Implemented a **KNN-based machine learning model** to predict body measurements
- Built a **Python (Tkinter) GUI** for data input and result visualisation
- Managed and optimised **MySQL databases** for efficient data processing

PROJECTS

Share Go — Ride-Sharing Platform *(Final Year Project of Computer Engineering)*

- Built a three-app system — passenger app, driver app and admin dashboard — using **React Native, Node.js, Express and MongoDB Atlas, with Supabase authentication and an AWS EC2 backend**
- Implemented live ride tracking, fare calculation, in-app chat and notifications over **Socket.io**, with JWT-based auth for riders and drivers
- Integrated **Google Maps APIs** for live routing, plus an **ESP32 + R307 fingerprint sensor** for hardware-based driver biometric verification

Haji Saab E-Commerce Platform Haji Saab

- Developed a web-based grocery shopping platform with product categories, search functionality, shopping basket and customer account management.
- Implemented a user-friendly shopping experience with location-based availability to help customers access services in supported areas.
- Built customer-facing features including authentication, Google sign-in, newsletter subscription and account access.
- Designed a responsive e-commerce interface with dedicated product browsing, basket management and customer navigation features.

The Whisky Circle E-Commerce Platform The Whisky Circle

- Developed a React-based e-commerce storefront featuring a product catalogue, shopping cart and checkout functionality.
- Built serverless Node.js APIs using AWS Lambda and API Gateway, with MongoDB for product, order and customer data management.
- Integrated Stripe for secure online payments and the Radar API for location-based functionality.
- Implemented customer and admin dashboards to support order tracking, inventory management and e-commerce operations.

SKILLS

Frontend: React.js, React Native, Vue.js 3 / Pinia, Tailwind CSS, JavaScript

Backend & Cloud: Node.js / Express, AWS (Lambda, API Gateway, EC2, S3, Amplify, Route 53), MongoDB / MongoDB Atlas, MySQL, Firebase, Supabase

Tools & Practice: Git / GitHub, REST API Design, JWT Auth, Stripe, Postman, C/C++

EDUCATION

Bachelor of Science in Computer Engineering
COMSATS UniversityIslamabad
Lahore, Pakistan
Sept 2021 - July 2025

MSc Data Science & Analytics | Placement
Brunel UniversityofLondon
London, United Kingdom
Jan 2026 - Present
